

ISOULE - MVP Scope Document (Version 1)

1. Product Vision

Isoule is a Life OS AI application designed to securely store personal memories and help users reflect and make better life decisions using contextual AI. The goal is to build a secure digital memory vault that can scale long-term.

2. MVP Objective

Build a lean, secure, and scalable Android MVP to validate with early users (50–100 users), while ensuring architecture can scale to 1,000 active users and up to 10,000 users with infrastructure scaling. No over-engineering in Version 1.

3. Core Features (MVP)

- User Authentication (Email + OTP login/signup)
- Basic user profile
- Add text memories
- Upload voice notes (compressed format)
- Optional photo upload (compressed + size limit)
- Automatic date & time tagging
- Timeline view (date-wise listing)
- AI Chat with contextual access to stored memories (API-based AI acceptable)
- One AI-generated daily reflection prompt (saved as memory)

4. Storage & Infrastructure

- Cloud-based backend (AWS / GCP / Azure preferred)
- Secure database for text data
- Object storage (S3 equivalent) for media files
- Encrypted storage (at rest and in transit)
- Permanent data deletion on account deletion
- Tier-based storage limits (No unlimited storage in MVP)
- Free users: 1–2GB storage limit
- Future paid storage tiers planned

5. Scalability Requirement

Architecture must support scaling from 100 users (validation phase) to 1,000 users without rebuild, and up to 10,000 users with infrastructure upgrade (without full redevelopment).

6. AI Personality

AI tone must be calm, thoughtful, non-judgmental, execution-focused, and stable like a second brain. It should not be overly casual or motivational.

7. Not Included in MVP

- Video storage
- Social sharing features
- Public feeds
- Multi-language UI
- Advanced analytics
- On-device ML models

8. Developer Deliverables Required

- Suggested tech stack
- Infrastructure cost estimate (100 users / 1,000 users)
- AI API cost estimation
- Realistic development timeline
- Milestone-based payment structure
